WHEELCHAIR ACCESSIBLE VEHICLES

Air suspension for Wheelchair Accessible Vehicles.

A major advantage of our air suspension is that it can lower your vehicle towards the floor to aid entry and exit. This is especially useful for wheelchair users as it significantly reduces ramp angles. An additional advantage is that a shorter ramp can be used, thereby reducing weight and improving the rear view of the driver.

Constant height

The weight distribution of a vehicle containing a wheelchair is not optimal. The original suspension can therefore sag, influencing the ride comfort substantially.

VB-Airsuspension has the solution. Our electronic ride height control ensures that your vehicle always maintains the optimum ride height, so that even with an unevenly distributed, or maximum load your vehicle will not sag. A constant ride height also has a positive impact on fuel consumption. An added benefit is that your vehicle looks the same, whether it is unladen, or fully laden.

VB-Airsuspension works with the following Wheelchair Accessible Vehicle manufacturers:

- 1 Atlas / Hill Gruau
- 2 CoTrim
- 3 GM Coachwork
- 4 Invatravel
- 5 Oughtred & Harrison
